

Chetan Narkhede

Software Engineer | Full Stack (Node.js · React · AWS)

narkhedechetan20@gmail.com | +91 72766 79740 | Pune, Maharashtra, India

PROFESSIONAL SUMMARY

Software Engineer with 4.5+ years of experience building and maintaining full-stack applications with a strong backend focus. Proficient in Node.js, TypeScript, and React, with hands-on exposure to AWS services (S3, Lambda, SQS, CloudWatch). Experienced in CMS integrations, REST API development, microservices architecture, and delivering high-quality features in agile environments. Adept at owning complex problems end-to-end and collaborating across engineering, QA, and DevOps teams.

WORK EXPERIENCE

Software Engineer I

Sept 2023 – Present

Contentstack India Pvt. Ltd | Pune, India

- Built and maintained CMS marketplace integrations for Wordbee and Trados (translation) and Shopify and BigCommerce (e-commerce), owning features end-to-end from development through client-facing release.
- Developed a Contentstack-to-Contentstack migration connector enabling customers to migrate content across stacks, organizations, and regions — with data mapping, approval workflows, and selective content migration support.
- Resolved critical JSON RTE bugs, implemented excluded-fields logic across nested structures in Wordbee, and eliminated infinite release-creation loops in Trados by introducing release reuse logic; upgraded release API to v2 with robust merge logic.
- Added CloudWatch-based monitoring and logging, improving production observability; rebuilt the Trados UI from a dashboard widget into a full-page React application with search, sorting, and status filtering.
- Collaborated across Engineering, QA, DevOps, Auth, and DBA teams during high-priority releases and production incidents; directly engaged with clients to diagnose issues, communicate resolutions, and restore application access — largely independently.

Software Engineer

Aug 2021 – Sept 2023

Coditas Solutions LLP | Pune, India

- Migrated APIs from a monolithic application to individual microservices, creating RESTful APIs using Node.js, Express, and TypeScript.
- Enhanced system architecture using AWS services — SQS for message queuing, S3 for storage, Lambda for serverless processing, and ECS for container orchestration.
- Optimized MongoDB database performance by implementing aggregation pipelines and strategic indexing, reducing response times significantly.
- Implemented Redis caching to enhance data retrieval speed and overall system performance.
- Integrated third-party APIs and collaborated with the frontend team on React-based UI improvements.
- Developed and integrated OpenAI NLP capabilities into an SEO automation tool using Flask and Python, automating keyword research and content generation workflows.

TECHNICAL SKILLS

Languages & Runtime: JavaScript, TypeScript, Node.js, Python

Frontend: React.js, HTML, CSS

Backend & APIs: Express.js, REST APIs, Microservices, GraphQL (Shopify)

Databases: MongoDB, PostgreSQL, MySQL, Redis, Mongoose, TypeORM

Cloud & DevOps: AWS (S3, Lambda, SQS, CloudWatch, ECS), Git

Integrations & Tools: Shopify GraphQL API, BigCommerce, Wordbee, Trados, Contentstack CMS, OpenAI API, Twilio

NOTABLE PROJECTS

Sales Enablement Platform

Role-based platform enabling sales teams to pitch financial products to US/Canada clients via phone and email. Built microservices architecture with Node.js, integrated Twilio for communication, and managed PostgreSQL data layer.

SEO Automation Tool

AI-powered tool leveraging OpenAI and Flask to automate keyword research and content generation. Integrated multiple third-party SEO services, enabling businesses to optimize online presence efficiently.

Content Migration Tool — Contentstack Connector

Built a connector within Contentstack's internal migration platform allowing customers to migrate content between stacks across different organizations and regions, with support for data mapping, approval workflows, and selective content migration.

Wordbee Translation Audit System

Designed and implemented a comprehensive audit logging system within the Wordbee integration, tracking key translation events, successes, and failures to enable faster root-cause identification and improve troubleshooting transparency for end users.

Trados Full-Page Dashboard

Redesigned the Trados Contentstack integration from a limited widget into a full-page React dashboard with search, sorting, and status-based filtering — significantly improving project visibility and UX.

EDUCATION

Bachelor of Engineering — Computer Engineering

Jun 2018 – May 2021

Savitribai Phule Pune University | Pune

Project: Social Distancing Detector using OpenCV — real-time distance analysis between individuals using image and video processing.

Diploma in Computer Engineering

Jun 2016 – May 2018

AISSMS Polytechnic | Pune

ACHIEVEMENTS

Winner — Coditas Generative AI Hackathon

Built a real-time transcription and analysis system for multi-channel customer conversations using Generative AI, enabling data-driven sales insights and actionable recommendations.
