

# Chetan Narkhede

Software Engineer | Backend & Full Stack | Node.js · React · TypeScript · AWS · GenAI

narkhedechetan20@gmail.com | +91 72766 79740 | Pune, Maharashtra, India

## PROFESSIONAL SUMMARY

---

Software Engineer with 5+ years of experience building backend and full-stack applications, with expertise in Node.js, Typescript, React, AWS, APIs, microservices, and integrations. Experienced in building CMS migration solutions, scalable backend systems, and AI-powered applications using LLMs and agentic workflows. Strong experience owning features end-to-end, from solution design and database architecture to implementation, deployment, and production support.

## WORK EXPERIENCE

---

### Software Engineer I

*Sept 2023 – Aug 2026*

**Contentstack India Pvt. Ltd** · Pune, India

- Worked extensively on CMS migration projects, helping customers migrate content from other CMS platforms to Contentstack using a configurable migration platform supporting data mapping, transformation, and custom migration scripts.
- Independently built a Contentstack-to-Contentstack migration connector supporting migrations across stacks, organizations, and regions — including content mapping, approval workflows, selective migration, and complex content relationships.
- Designed and implemented multi-agent AI workflows for software development, automating stages from feature specification and PRD/TRD generation through test-case creation, implementation, automated testing, Playwright-based UI validation, and documentation — adopted across the team.
- Implemented task decomposition and specialized sub-agent workflows for complex tasks, improving context isolation and output reliability while optimizing token usage by routing simpler tasks to lower-cost models.
- Built and maintained CMS marketplace integrations for Wordbee and Trados (translation) and Shopify and BigCommerce (e-commerce), delivering features end-to-end through development, releases, and production support.
- Improved production observability using AWS CloudWatch; resolved critical production issues and collaborated across Engineering, QA, DevOps, Auth, and DBA teams while directly supporting customers.

### Software Engineer

*Aug 2021 – Sept 2023*

**Coditas Solutions LLP** · Pune, India

- Migrated APIs from a monolithic application to individual microservices, creating RESTful APIs using Node.js, Express, and TypeScript.
- Enhanced system architecture using AWS services — SQS for message queuing, S3 for storage, Lambda for serverless processing, and ECS for container orchestration.
- Optimized MongoDB database performance by implementing aggregation pipelines and strategic indexing; implemented Redis caching to improve data retrieval speed and overall system performance.
- Built an LLM-powered sync-up automation application using OpenAI, Gemini, LangChain, and LangGraph that conducted live team sync-ups, collected work updates, and integrated with Jira REST APIs to automatically update ticket statuses, comments, and assignments — adopted by multiple teams.
- Worked on internal GenAI projects and client POCs using RAG, vector databases, embeddings, and data anonymization techniques to build and evaluate LLM-powered solutions.
- Developed an AI-powered SEO automation tool integrating OpenAI with Flask and Python, automating keyword research and content generation workflows for a US-based client.

## TECHNICAL SKILLS

---

**Languages & Runtime:** JavaScript, TypeScript, Node.js, Python

**Backend & APIs:** Express.js, REST APIs, Microservices, GraphQL (Shopify)

**Frontend:** React.js, HTML, CSS

**Databases & Caching:** MongoDB, PostgreSQL, MySQL, Redis, Mongoose, TypeORM

**Cloud & DevOps:** AWS (S3, Lambda, SQS, ECS, CloudWatch), Git

**Generative AI & Agentic AI:** OpenAI API, Gemini, LangChain, LangGraph, RAG, Vector Databases, Embeddings, Data Anonymization, Agentic Workflows, Multi-Agent Systems

**Integrations & Tools:** Contentstack CMS, Shopify GraphQL API, BigCommerce, Wordbee, Trados, Jira REST APIs, Twilio, Playwright

## NOTABLE PROJECTS

---

### Sales Enablement Platform

Role-based platform enabling sales teams to pitch financial products to US/Canada clients via phone and email. Built microservices architecture with Node.js and TypeScript, integrated Twilio for communication, and managed PostgreSQL data layer with role-based access control.

### AI-Powered Real-Time Sales Assistance POC | GenAI Hackathon Winner

Built a Generative AI-powered proof of concept as an enhancement to an existing US-based Sales Enablement Platform. Used AWS Transcribe and OpenAI to analyse live agent-prospect conversations, identify whether the conversation was progressing positively or negatively, and provide real-time guidance and recommended actions to sales agents. The POC won the Coditas Generative AI Hackathon, was presented to the client, and subsequently progressed into the development phase.

### SEO Automation Tool

Built and delivered an end-to-end AI-powered SEO automation platform using Python, Flask, and OpenAI, automating keyword research and content generation while integrating multiple third-party SEO services for a US-based client.

### Content Migration Tool — Contentstack Connector

Built a connector within Contentstack's internal migration platform allowing customers to migrate content between stacks across different organizations and regions, with support for data mapping, approval workflows, and selective content migration.

## EDUCATION

---

### Bachelor of Engineering — Computer Engineering

*Jun 2018 – May 2021*

**Savitribai Phule Pune University** · Pune

Project: Social Distancing Detector using OpenCV — real-time distance analysis between individuals using image and video processing.

### Diploma in Computer Engineering

*Jun 2016 – May 2018*

**AISSMS Polytechnic** · Pune

## ACHIEVEMENTS

---

### Winner — Coditas Generative AI Hackathon
